

American Wood-Preservers' Association 101st Annual Meeting held at the Royal Sonesta Hotel in New Orleans, Louisiana May 15th-17th, 2005

CedarCide Industries Inc. formally introduced their Dynamic new Wood Preservation product CedarShield to the members and attendees of the recent AWWPA convention. Products treated with the Non-Aqueous based Drying Agent, Wood Stabilizer, Termiticide, Water Proofing and Insect and Decay control solution were displayed at the show. They included Red Oak, White Oak, Pecan and Mulberry Railroad Ties, Plywood Sheets and Siding, Dimensional Structural Construction material and Hardwood Deck Material. Both Kiln Dried and Green Treated Southern Yellow Pine and Spruce-Pine-Fir samples were on display for the numerous North American and International guests. The Phenomenal penetrating ability of the Solvent based Cedar Oil and Silicone solution could be observed in the vertical Oak specimen which mirrors the plants natural food delivery system. Cedarshield enters the woods cellular structure in the same manner the living tree takes on nutrition. Entering the vascular system of soft and closed cell woods through its summer growth rings and hardwoods through its veins, the media compatible preservative is delivered to the cellular structure of any type of wood and Bamboo. CedarCide Industries currently has three active employee memberships in AWWPA. The 2006 annual meeting will be held in Austin, Texas.
