

## **Chemical Free Snake Mole and Grub Control Now Available For Residential, Commercial and Golf Course Application**

*CedarCide Industries of The Woodlands Texas announced today that "SMG" also known as Snake Mole and Grub control is now available to consumers and Pest Control Operators Worldwide. The Unique Cedar Oil based product is effective in eradicating Grub Worms and other soil borne insects that damage millions of acres of Residential, Agricultural and Golf Course Turf each year. Moles and Snakes consider SMG treated areas off limits.*

(PRWEB) June 26, 2006 -- CedarCide Industries of The Woodlands Texas announced today that "SMG" also known as Snake Mole and Grub control is now available to consumers and Pest Control Operators Worldwide. The Unique Cedar Oil based product is effective in eradicating Grub Worms and other soil borne insects that damage millions of acres of Residential, Agricultural and Golf Course Turf each year. Moles and Snakes consider SMG treated areas off limits.

Our invention is breakthrough technology at its best said Dave Glassel of CedarCide Industries, Inc., a Woodlands, Texas based manufacturer of Chemical Free Solutions. We provide Next Generation active ingredients to the Agriculture, Wood Protection and Insect Control Industries. All of our formulations are based on Zero Toxicity ingredients, primarily Cedar Oil, which can be found in large quantities in the rougher terrain of Central and West Texas. Our formulations include Silicone (quartz) derivatives provided to us by our product development partner Dow Corning of Midland, Michigan.

SMG will enhance the turf condition of numerous landscapes in the coming years. No longer is it necessary to utilize microbial killing toxins in an attempt to control soil borne Grub Worms and their Mole counterparts. Satisfactory results can be obtained with one SMG treatment.

SMG Concentrate is formulated primarily from Cedar Oil and Ethyl Lactate Bio Solvents. These two actives in concert with a water carrier are instrumental in surfacing and killing Grubs from infested turf. The eradication of Grubs interrupts important food chain cycles. The food source for Moles is Grubs. Moles tunnel in the areas below the turf in search of Grubs. The food source for Venomous and heat seeking Snakes are Moles. Snakes frequent Grub infested turf in search of food, primarily the Mole. SMG when applied properly will interrupt the EGG LAYER CYCLE of the Grub. After treatment the aroma of Cedar Oil will repel the May Beetle or June Bug. Future generations of Grubs will be avoided by repelling the bug that lays the egg, that evolves into the Grub worm. Venomous Snakes are pheromone driven. The aroma of Cedar Oil masks existing Kairomones (aromas) as well as impairs the mental faculties of the Snake which deters them from entering the area. Initial treatments with SMG should be done to obtain a 1 inch depth penetration of moisture in the soil. Suggested application with a hose end sprayer or any other type of high volume water disbursement device is recommended. Application prior to rainfall will promote the leaching of SMG into the soil and enhance the SMG results. The treatment is effective on numerous species of insects including but not limited to Mosquitoes, Flies, Fleas, Chiggers, Ticks, Mites, Scorpions, Mole Crickets and others. SMG will dissolve the eggs and larvae of all insects. Recommended application rate is 400:1 to a soil penetration of 1 inch.

Homeowners plagued with perpetual turf destruction from Grub Worms and Moles can now enjoy a Snake free environment as well as a beautiful Lawn. The Barrier of Entry established by the treatment with SMG will make the treated turf OFF LIMITS to Venomous Snakes which are commonly known as HEAT SEEKERS. When entering SMG treated areas, the Snake experiences a pheromone interruption trauma with

end results that impair the Snakes mental capacities. Treatment with SMG is instrumental in the masking of Kairomones, the specific odor emitted by all plant matter. This important event provides insect obedience at its best.

SMG is shipped in concentrated form only. It is sold in quarts, gallons and 5 gallon pails. It can be delivered by a existing irrigation system or applied with a hose end sprayer. No applicators license is required. Normal eye wear protection should be worn for general safety purposes. There are no RE-ENTRY boundaries required for humans or animals subsequent to SMG treatment.

To learn more about SMG or to purchase the product visit the CedarCide Industries Wholesale Retail Store [www.cedarcidestore.com](http://www.cedarcidestore.com) or call 1 800 842 1464.
