

## **One Time, Lifetime Treatment for Decks Docks and Fences-CedarShield Penetrant and Stabilizer Triggers Early Stages of Wood Petrification, Eliminates Warping, Splitting and Cupping**

*World Renowned Cedar Oil Scientist Dave Glassel developed the unique product using Texas Red Cedar Oil and Quartz Rock compounds which when combined provide total dimensional stability to treated wood. The use of CedarCide Wood Protection Products are the Panacea of wood treatment for Decks, Docks, Fence and other outdoor structures. It is considered a One Time, Lifetime Treatment that renders the wood insect, moisture and decay resistant.*

(PRWeb) April 10, 2007 -- CedarCide Industries of The Woodlands, Texas announces the availability of their most recent invention known as CedarShield Deck Dock and Fence. Dave Glassel, acknowledged as the World's leading Cedar Oil Scientist developed the unique product using Texas Red Cedar Oil and Quartz compounds which when combined provide total dimensional stability to the treated wood. The use of CedarCide Wood Protection Products are the Panacea of wood treatment for Decks, Docks, Fence and other outdoor structures. It is considered a Lifetime Treatment that eliminates warping, splitting and cupping of wood as it ages. A one time treatment will render the treated wood insect, decay and moisture resistant forever.

CedarShield Deck Dock and Fence is a PENETRANT, not a coating. Unlike the common Thompson Water Sealer and other Coatings currently utilized for treatment of outside and element exposed structures, the CedarCide products are referred to as a Penetrant Preservatives. Application of this product provides a total penetration of the wood transforming the media into a alternative wood mass that is scientifically referred to as the early stages of Wood Petrification. The CedarShield solution triggers the exodus of both free and bound water in the fiber structure and cellular make up of wood. The quartz additive enters the molecular composition of the cellulose structure and internally bulks the molecules with a flexible matrix. Glass like coatings then seal off the fiber structure of the wood protecting it from moisture absorption. The end result of the treatment renders the wood 100% Insect, Decay and Water resistant. The wood is no longer subject to moisture either as air borne humidity or in liquid form. Expansion and contraction of the wood ceases and total dimensional stability is obtained. Fastener corrosion issues are eliminated and there is no longer any nail or screw rejection. In this stable environment the life cycle of paints and stains are extended. Cedar Oil and quartz compounds are sealed in the wood and provide the insect and antimicrobial protection required for extended life of the structure. The product can be used to encapsulate and eliminate leaching of the carcinogenic Copper and Arsenate treatments commonly used for in ground and above ground applications. Cedar Oil and Quartz are both identified as Natural or Organic products and are considered Non Toxic and Safe to Human and Animal life.

CedarShield Deck Dock and Fence wood stabilizer products can easily be applied with the use of a compression garden sprayer, air or airless paint gun, brush or roller. The thin solution will wick instantly into the timber. It may be applied to decks, docks, fences, wood structures and playground equipment. It can be used to control deterioration of exposed wood such as Facial Board and Sopsnets, Cedar Shake Shingles and Siding, Log Home Structures, Barns and Equine Centers. Application to new, previously treated or old wood is beneficial. Wood rotter and insect attacks will be instantly halted from a thorough penetration of CedarShield. Treatment solution is dry within minutes of application and can be stained or painted with either water or oil based coatings.

CedarCide Wood protection Products are available wholesale or retail direct from the manufacturer by visiting the CedarCide Store at [www.cedarcidestore.com](http://www.cedarcidestore.com) or you can visit the [www.cedarcide.com](http://www.cedarcide.com) website for more information about CedarShield and other Cedar Oil formulated Insect Control products.

CedarCide Industries is a manufacturer and provider of active ingredients to the Agriculture, Plastics, Wood Preservation and Insect Control Industries. The company promotes license and supply agreements to formulators and Private Label Packagers Globally. For more information on how to become a dealer, distributor or private label contractor on CedarShield Wood Protection products please contact via e-mail or call 1 800 842 1464 Stateside International 281 367 5075.
