

## **Cedar Oil Based Invention Turns Junk Woods Into Priceless Furniture, Carvings and Artifacts-- A Much Needed Panacea for the Wood Turning Industry**

*The most desirable and beautiful woods in the World were off limits to Artisans until the invention of TURNERS CHOICE. Junk woods are known to be the most beautiful timber specimens available. Unfortunately, the cellular make up of their media does not lend itself to the craftsmans touch. Breakthrough technology from CedarCide enables the use of Junk Woods for numerous wood products. There are 40,000 independent Woodturners in the USA. A estimated 250,000 World Wide. Their products include salad bowls, jewelry chests, Vases, fountain pen barrels and numerous variations of containers.*

(PRWEB) August 19, 2005 -- CedarCide Industries Inc., located in the High Tech area of The Woodlands, Texas has invented a Wood Stabilization Product called TURNERS CHOICE. We are convinced it is the panacea for the Wood Turning and Furniture Industry said Dave Glassel, inventor of the dynamic product. We have given the industry a solution that will allow them to use the most beautiful woods on the planet for the manufacture of their products.

Prior to TURNERS CHOICE most Exotic or Junk woods were off limits to artisans and manufacture's because of the instability of the woods cellular composition. Sophisticated drying agendas of up to five years would still often result in the cracking and splitting of the project prior to completion. Junk Native Woods often referred to as the most beautiful could not be used because of dimensional stability issues.

Now, with a treatment of TURNERS CHOICE, the trashiest of all woods can be used without any cracking or splitting issues. The penetration of the cellular structure of the specimen with the Cedar Oil and Silicone patent pending solution results in a phenomenon compared to gluing the wood from the inside out. Completion of the project is not conditioned upon the drying time of the wood. Start to finish without standstill is the order of the day. Humidity levels will no longer affect the finished product.

TURNERS CHOICE is formulated with FDA approved ingredients that are considered food grade and can be used for manufacture of Salad Bowls and other food containers. The treatment does not compromise normal finishing protocol that use aqueous and oil based stains and sealers.

TURNERS CHOICE is available factory direct for a price of \$49.95 per gallon. Call 1 800 842 1464 to order. To learn more about TURNERS CHOICE visit [www.cedarcide.com](http://www.cedarcide.com) or call 800 842 1464.
